IILM UNIVERSITY

GREATER NOIDA, UTTAR PRADESH

INTERNSHIP REPORT

Artificial Intelligence & Machine Learning

Submitted to

School of Computer Science and Engineering

In partial fulfilment of the requirements of the degree of

B.Tech (Computer Science & Engineering)

Submitted by

ASAD ALAM

Roll Number: 25SCS1003001356

Semester: 3rd Semester **Section:** 2CSE16

Batch: 2025–2029

Internship Organization: RabTech Academy

Internship Mode: Remote **Duration:** 30 Days

Internship Period: 11 September 2026 – 11 October 2026

Academic Session 2026

CANDIDATE'S DECLARATION

I, ASAD ALAM, hereby declare that the internship report titled “Artificial Intelligence & Machine Learning Internship at RabTech Academy” has been prepared by me in fulfilment of the academic requirements of the Bachelor of Technology programme in Computer Science and Engineering at IILM University, Greater Noida.

I affirm that this report presents the internship information and task assessment details available to me. The organization, internship period, certificate identifiers, task titles, scores and approval decisions have been reproduced from the certificate and evaluation record issued by RabTech Academy. Any workflow diagram or explanation in this report is presented as a conceptual description of the assessed task sequence and is not intended to claim an unverified dataset, implementation, model metric, deployment, or production system.

I further declare that this report has not been submitted to any other institution for the award of any degree or diploma. References to external technical documentation are acknowledged in the bibliography.

Roll No.: 25SCS1003001356

ACKNOWLEDGEMENT

I take this opportunity to express my sincere gratitude to everyone who supported me during the completion of my remote internship in Artificial Intelligence and Machine Learning at RabTech Academy. The internship provided a structured opportunity to engage with a sequence of assessed tasks covering problem framing, responsible data considerations, feature engineering, machine-learning modelling, deep learning and natural-language processing, and an inference API capstone.

I am thankful to RabTech Academy for providing the internship opportunity and for evaluating the six submitted tasks. I acknowledge the assessment record issued with my completion certificate, which records an overall score of 92/100, Grade A+, and the result “Outstanding,” with all six tasks approved.

I also express my gratitude to IILM University, Greater Noida, and the School of Computer Science and Engineering for the academic environment and encouragement that support my learning. I am grateful to my teachers, family and well-wishers for their continued guidance and motivation.

04	Supervised Classification / Regression Modeling & Tuning	95/100	A+	APPROVED	ADMIN-RABTECH-001
05	Deep Learning / NLP Text Classifier with PyTorch/TensorFlow	95/100	A+	APPROVED	ADMIN-RABTECH-001
06	Real-Time ML Inference REST API & Capstone	95/100	A+	APPROVED	ADMIN-RABTECH-001

Certificate ID: RAB-CERT-2026-30343B6A9C1C

Permanent Intern ID: RAB-2026-0BBFE8CFBF

Scored tasks: 6/6

Verify this record using either ID in the RabTech Academy public registry.

EVALUATION / 02 OF 02

4. PROJECT DESCRIPTION

4.1 Introduction

This report presents an account of the 30-day remote internship in Artificial Intelligence and Machine Learning undertaken by ASAD ALAM at RabTech Academy. The internship period is printed on the completion certificate as 11 September 2026 to 11 October 2026. The certificate issue date is printed as 19 September 2026; both dates are preserved exactly as shown in the official record.

The assessed programme consisted of six tasks progressing from professional communication and machine-learning problem framing to preprocessing, supervised modelling, deep learning/NLP, and a real-time inference REST API capstone. The accompanying evaluation report records that all six tasks were approved. The overall result is 92/100, Grade A+, described as “Outstanding.”

The purpose of this report is to document the scope represented by the task titles, the conceptual workflow connecting them, and the verified completion evidence. The available certificate does not specify datasets, source-code repositories, model architectures, hyperparameters, measured model performance, API endpoints, or deployment infrastructure; these details are therefore not asserted here.

4.2 Organization Profile

RabTech Academy is identified in the supplied completion certificate and evaluation report as the organization that issued and assessed this remote Artificial Intelligence and Machine Learning internship. The certificate bears the name of Benitha Selvarani, CEO & Founder, RabTech Academy. The evaluation record is marked “Mentor Verified” and lists ADMIN-RABTECH-001 as the reviewer for each of the six tasks.

The documents supplied for this report establish the organization name, internship domain, remote mode, 30-day duration, certificate and intern identifiers, and task assessment outcomes. They do not provide a detailed corporate history, address, accreditation profile, or description of the academy’s wider services. Accordingly, this profile is limited to the information verifiable from the issued records.

4.3 Problem Statement

Machine-learning work involves more than selecting an algorithm. A useful workflow must begin by defining the problem and considering responsible data use, then prepare appropriate features, develop and assess a supervised model, and consider how a trained model can be made available for inference. Text-based applications may additionally require deep-learning or natural-language-processing methods.

The internship’s six assessed tasks map to these stages. The learning challenge represented by the programme was to develop an end-to-end understanding of key AI/ML activities—from framing a problem and preparing data through modelling and text classification to the design of a real-time inference REST API capstone. The supplied record confirms task completion and assessment, but does not identify a particular industry dataset or real-world deployment scenario.

4.4 Project Objectives

The objectives represented by the internship task sequence were:

• To communicate the internship opportunity professionally through a LinkedIn publication.

• To frame a machine-learning problem and prepare a responsible data card.

• To understand feature engineering and the preparation/preprocessing of data for modelling.

• To work with supervised classification and regression modelling, including model tuning.

• To explore deep-learning and NLP-based text classification using PyTorch or TensorFlow, as stated in the assessed task title.

• To address real-time machine-learning inference through a REST API and capstone task.

• To complete all six assessed tasks and meet the programme's evaluation requirements.

4.5 Scope of the Project

The documented scope covers six assessed activities. The first task concerns publishing the internship offer on LinkedIn. The second introduces problem framing and responsible data documentation. The third focuses on feature engineering and preprocessing. The fourth addresses supervised classification/regression and tuning. The fifth concerns a deep-learning/NLP text classifier with PyTorch/TensorFlow. The sixth addresses a real-time ML inference REST API and capstone.

The scope is described at the level supported by the task names and evaluation sheet. The supplied documents do not establish the dataset used, exact preprocessing operations, model family, training configuration, numerical model metrics, API framework, hosting platform, or a live deployment. Consequently, the architecture and methodology below are explanatory representations of the task sequence, not a reconstruction of undocumented implementation details.

4.6 Technologies and Tools

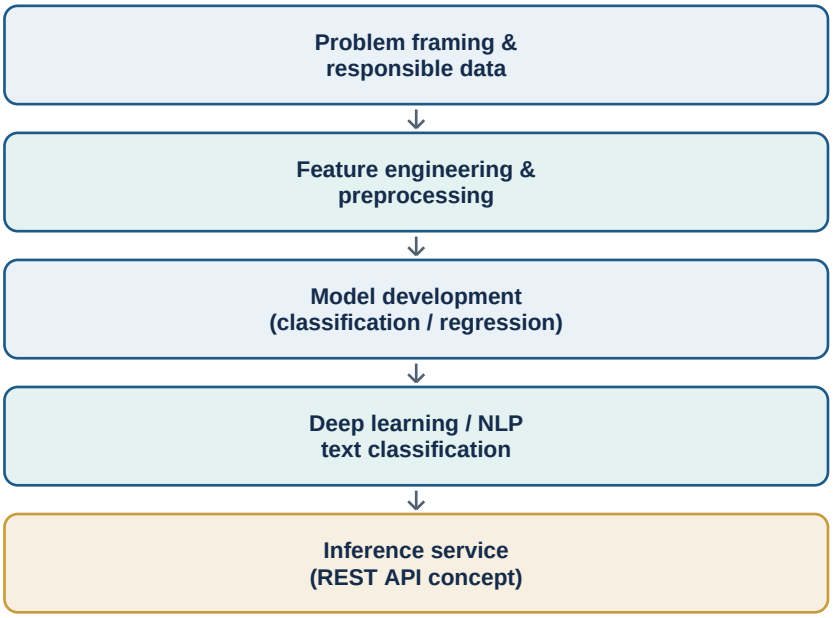

The completion certificate and evaluation report explicitly identify the internship domain as Artificial Intelligence & Machine Learning. Task 5 names PyTorch/TensorFlow as the frameworks associated with the deep-learning/NLP text-classifier task. Task 6 names a REST API as the interface concept for real-time inference.

Area	Confirmed from the assessment record
Domain	Artificial Intelligence & Machine Learning
Deep learning / NLP	PyTorch / TensorFlow (named in Task 5; the record does not say which framework was ultimately used)
Model development	Supervised classification, regression and tuning (Task 4)
Data preparation	Feature engineering and preprocessing (Task 3)
Inference interface	REST API concept for real-time ML inference (Task 6)
Communication	LinkedIn publication (Task 1)

> *No programming language, dataset, IDE, database, cloud service, model library beyond the named alternatives, or API framework is confirmed by the certificate/evaluation record. Such items are intentionally not presented as tools used.*

4.7 System Architecture

The following conceptual architecture arranges the assessed topics into a coherent workflow. It is intended to show how problem definition, data preparation, modelling, text classification and inference can relate to one another. It is not an assertion that a specific production system was built or deployed during the internship.

Conceptual workflow derived from the six assessed task titles; not a claim of a deployed system.

The first stage establishes the problem context and responsible data considerations. The next stage represents feature engineering and preprocessing. The model-development stage reflects the supervised classification/regression task, while a parallel or specialized modelling path represents the deep-learning/NLP text-classifier task. The final stage represents the REST API inference capstone. The assessment sheet confirms these task topics but does not provide implementation-level component details.

4.8 Methodology

The internship methodology is represented by the six tasks in the order shown in the official evaluation report. Since the supplied record does not specify weekly schedules or detailed lab instructions, the methodology is organized by task rather than by invented week-wise modules.

Task	Assessed activity	Score / Grade	Decision
01	Publish Your Artificial Intelligence & Machine Learning Internship Offer on LinkedIn	85/100 · A	APPROVED
02	ML Problem Framing & Responsible Data Card	85/100 · A	APPROVED
03	Feature Engineering & Preprocessing Pipeline	95/100 · A+	APPROVED
04	Supervised Classification / Regression Modeling & Tuning	95/100 · A+	APPROVED
05	Deep Learning / NLP Text Classifier with PyTorch/TensorFlow	95/100 · A+	APPROVED

Task	Assessed activity	Score / Grade	Decision
06	Real-Time ML Inference REST API & Capstone	95/100 · A+	APPROVED

Task-wise explanation

Task 1 – LinkedIn publication: The first assessed activity was to publish the Artificial Intelligence & Machine Learning internship offer on LinkedIn. The evaluation record assigns 85/100, Grade A, and marks it approved.

Task 2 – Problem framing and responsible data card: This task focused on defining an ML problem and documenting responsible data considerations. It received 85/100, Grade A, and was approved.

Task 3 – Feature engineering and preprocessing: This activity covered the preparation of features and a preprocessing pipeline as named in the task. It received 95/100, Grade A+, and was approved.

Task 4 – Supervised modelling and tuning: This task addressed classification/regression modelling and tuning. The evaluation record assigns 95/100, Grade A+, and approved status.

Task 5 – Deep learning / NLP text classifier: This task title specifies a text-classification activity using PyTorch/TensorFlow. The certificate does not identify which of the two frameworks was selected or provide model metrics. The task received 95/100, Grade A+, and was approved.

Task 6 – Real-time inference REST API and capstone: The final task addressed an ML inference REST API and capstone. No endpoint, URL, hosting provider or implementation framework is specified in the supplied record. It received 95/100, Grade A+, and was approved.

The evaluation report lists ADMIN-RABTECH-001 as reviewer for each task and marks the record “Mentor Verified.” The overall result is 92/100, Grade A+, “Outstanding,” with 6/6 tasks approved.

4.9 Expected Outcomes

The internship task sequence and its successful assessment indicate the following learning outcomes:

• An understanding of how to frame a machine-learning problem and record responsible data considerations.

• Familiarity with the role of feature engineering and preprocessing in an ML workflow.

• Exposure to supervised classification and regression modelling and the purpose of model tuning.

• Exposure to deep-learning and NLP text classification using a framework named in the task brief (PyTorch/TensorFlow).

• An understanding of the role of a REST API in making model inference accessible to an application or client.

• Experience communicating a professional internship update through LinkedIn.

• Successful completion of all six assessed tasks, with an overall score of 92/100 and an Outstanding A+ result.

> *These outcomes are stated at the level supported by the task descriptions and final assessment. Specific accuracy, precision, recall, F1-score, latency, throughput, or other quantitative model/service outcomes are not available in the supplied certificate and evaluation report.*

4.10 Certificates / Communication Proof

The RabTech Academy Certificate of Completion and the attached Task Evaluation Report are reproduced in Chapter 3. The certificate identifies ASAD ALAM, the Artificial Intelligence & Machine Learning domain, a 30-day course duration, the internship period, certificate ID RAB-CERT-2026-30343B6A9C1C, intern ID RAB-2026-0BBFE8CFBF, and the issue date 19 September 2026.

The evaluation report records an overall result of 92/100, Grade A+, “Outstanding,” and confirms that all six tasks were approved. It lists the reviewer as ADMIN-RABTECH-001 and states that the record may be verified using either the certificate ID or permanent intern ID in the RabTech Academy public registry. No separate offer letter, email thread, or LinkedIn screenshot was included among the supplied documents; therefore, no such communication proof is represented as attached.
